FINO 2 - OFFSHORE RESEARCH PLATFORM

Expert Breakfast on 26 June 2019, 9.00 - 10.45

Introduction to the latest technology and research at FINO 2

FINO 2 is one out of three research platforms in the North Sea and the Baltic Sea (FINO = Forschungsplattformen in Nord- und Ostsee), built in close distance to large offshore wind farms to explore the environmental conditions at the site and to identify possible effects of offshore wind farms on the marine environment.

Since the platform was established in 2007, extensive research on topics such as meteorology, oceanography, ecology, and shipping has been carried out and is constantly supplemented with new research.

In short presentations (which will be held in German), you will receive an introduction to the latest technology and research at FINO 2, showing how the collected data could also support your company and projects. In a subsequent Q & A session, you will have the opportunity to discuss your questions with our partners and experts. We will have prepared a small breakfast for you - your participation is free of charge.
